

Company ABO valve expands its sales network by establishing a branch in Turkey

Olomouc, Czech Republic, 13th August 2015

The Czech Republic based butterfly valve manufacturer – ABO - is establishing a branch in Turkey and thus expanding its branch network up to 7 subjects in total.

Already during the initial establishment of ABO, the company senior management has set the path forward towards developing and servicing the global market for butterfly valves. Currently, the Olomouc based parent company manages six foreign branches and as of August, a new branch in Istanbul, Turkey will start operations. Turkey was chosen due to its increasing role in global economy with strong prospectus for growth in the power and industrial sectors. Istanbul was logically chosen due to its position as the “heart” of the Turkish economy.

Establishment of a branch office in Turkey has been preceded by a series of steps with regards to administrative and financial considerations. The whole process was coordinated with an external partner as far as legal issues.

Originated in Olomouc, Czech Republic, as single production facility for concentric valves - ABO valve – grew over time in a whole group ABO entities, which includes as of right now seven branches listed below. Data in brackets clarify the location of branch office and the year of its foundation.

- ABO Slovakia (Slovakia, 1996)
- ABO Armatura (Russia, 2008)
- ABO valve (Singapore, 2010)
- ABO Ukraine (Ukraine, 2013)
- ABO Flow Control (China, 2014)
- ABO Middle East (Bahrain, 2014)
- ABO Armaturen (Turkey, 2015)

"For ABO, the basic foundation for successful growth, is continuous improvement of quality of our service towards our customers and partners. Branches located nearby our customers in crucial territories are part of this philosophy," explains ABO business strategy Ing. Miroslav Student, CEO of ABO valve.

ABO senior management continues its work while evaluating potential markets with the aim of strengthening ABO presence on those markets in the near future. A very promising geographical area appears to be the United Arab Emirates, which are currently being serviced by our branch in Bahrain. UAE is being considered as a hub for further expansion of ABO production and services in the region.
